

Benefits of using our Green Brick Production Machine:

1. High Durability: The finest concrete compacted by high pressure and vibration gives substantial strength to the block. Proper curing increases compressive strength of the blocks.
2. Cost effective: All the sides of the Concrete Block are even and smooth, therefore thick concrete plaster after completing the walls are NOT needed.
3. Time effective: Concrete Hollow Blocks allow faster construction and save labor time.
4. ECO-Friendly: Unlike traditional bricks, burning in the fire for manufacturing is NOT needed at all and there is no release of any greenhouse gases in the environment.
5. Comfortable Interior: Due to its Hollow structure, it works as natural insulation sound proof and keeps the room cool in summer & warm in winter.
6. Operating Power: The hydraulic Brick production Machine Consume as low power as 1500 W, 3 Phase/ Single Phase 50Hz
7. The Machine is Completely Hydraulic, so the wear is 80% less then other mechanical Machine.
8. We will cover the after sell Service for One year, and Installations and Training are completely Free.
9. The regular Machine of Size is 4Ft X 6.5Ft X 5Ft (W X H X D) Max. Other than Machine size, the space requirements depends on the production/Day.

Serial No.	Size in mm	Piece/Stroke	Approximate Production/day (8 hours)	Approximate Material Cost/block.	Approximate Selling price/block
1	390*100*190 Hollow Block	6	2800	BDTk 20.50	BDTk 42~47
2	240*115*70 Solid Brick	12	5000	BDTk 4.5	BDTk 9~10
3	222*110*100 Solid Brick	12	5000	BDTk 5.5	BDTk10~11
4	250*125*100 Hollow Brick	8	3800	BDTk 4.25	BDTk 10~11
5	Lego block	6~8	2500~3500	BDTk 5.5	BDTk 10~11

**N:B:.The Brick Molding machine's Maximum Mold/ Dice holding capacity/Space is:
800mm *650mm* 200mm.**

**If your requirements is more than above mention Mold size than we have to customise the
Brick Molding Machine according to your requirements.**
